

- FIRST, LET'S FIND $F(x)$.

Q1

$$\begin{aligned}
 e^{-F(x)} &= e^{-x} x^n \\
 &= e^{-x} e^{n \ln x} \\
 &= e^{-x} e^{n \ln x} \\
 &= e^{n \ln x - x} \Rightarrow F(x) = -n \ln x + x
 \end{aligned}$$

- WHERE IS MINIMUM OF $F(x)$?

$$\frac{dF(x)}{dx} = -n \frac{1}{x} + 1 = 0 \Rightarrow \underbrace{x_0 = n}_{F(x) \text{ minimum}}$$

~~$\frac{d^2F(x)}{dx^2}$~~

$$F''(x) = n \frac{1}{x^2}$$

$$\begin{aligned}
 F(x) &\approx \underbrace{F(x_0)}_{\text{min}} + F'(x_0) \frac{(x-x_0)^2}{2} \\
 &\approx -n \ln n + n + \frac{n}{n^2} \frac{(x-n)^2}{2}
 \end{aligned}$$

$$\approx n(1 - \ln n) + \frac{1}{n} \frac{(x-n)^2}{2}$$

FOR $n \gg 1$, $\ln n \gg 1$, we have:

$$x - n \ln n + \frac{1}{n} \frac{(x-n)^2}{2}$$

PUT THIS BACK TO OUR INTEGRAL:

$$n! = \int_0^\infty \exp\left(n \ln n - \frac{1}{n} \frac{(x-n)^2}{2}\right) dx$$

$$= \int_0^\infty n^n \cdot \exp\left(-\frac{1}{n} \frac{(x-n)^2}{2}\right) dx$$

AND NOW I DON'T KNOW WHAT.

SIMPLY WE OBTAIN: $n! \sim \sqrt{2\pi n} n^n e^{-n}$

$$\ln n! \sim \ln \sqrt{2\pi n} + \ln n + \ln(n^n e^{-n})$$

$$\sim \frac{1}{2} \ln n + (\ln n^n) + \ln e^{-n}$$

$$\sim \frac{1}{2} \ln n - n + \cancel{n \ln n} \cancel{\ln e^{-n}}$$

$$\sim \frac{1}{2} \ln n - n + n \ln n$$

$$\sim n \ln n - n$$

$n \ln n - n$ AS REQUIRED.

Q2 N PARTICLES

$$E \propto \sum_{i=1}^N (\pi_i^2 + q_i^2 + \alpha_i^2)$$

WE WANT NUMBER OF
POSSIBLE π_i, q_i, α_i
WHICH MAKES

$$\sum_{i=1}^N (\pi_i^2 + q_i^2 + \alpha_i^2) \leq E$$

CONSIDER:

1D CASE:

$$x^2 \leq E$$

x INTEGER & $E \gg 1$

NUMBER OF POSSIBILITIES FOR x
IS PROPORTIONAL TO $E^{1/2}$

2D CASE:

$$x^2 + y^2 \leq E$$

EACH GRIDPOINT
IS (x, y)
POSSIBILITY

AREA OF CIRCLE \propto RADIUS²

$$\propto \sqrt{E}^2$$

$$\propto E$$

\Rightarrow NUMBER OF POSSIBILITIES $\propto E$

3D CASE:

$$x^2 + y^2 + z^2 \leq E$$

~~AREA~~
VOLUME OF SPHERE \propto

NUMBER OF POSSIBILITIES
FOR x, y, z

VOLUME OF SPHERE \propto

$$\text{RADIUS}^3 \propto \sqrt{E}^3 \propto E^{\frac{3}{2}}$$

OBSERVATION: NUMBER OF POSSIBILITIES SCALES AS:

$$E^{\frac{\text{NUMBER OF DIMENSIONS}}{2}}$$

WE HAVE:

$$\sum_{i=1}^N (m_i^2 - q_i^2 + r_i^2) \leq E$$

IE A ~~3N~~ 3N DIMENSIONAL CASE.

SO WE HOPE, BASED ON THE ABOVE:

$$G(E) \propto E^{\frac{3N}{2}} \Rightarrow \underline{\alpha = \frac{3}{2}}$$

Q3 (i)

$$E = \text{const.} \Rightarrow S(E) = \text{const.}$$

$$\frac{dN(E_1)}{dE_1} \propto \frac{d}{dE_1} \left[\exp(S_1(E_1)) + \exp(S_2(E - E_1)) \right]$$

$$\propto e^{S_1(E_1)} e^{S_2(E - E_1)} \left(\frac{dS_1(E_1)}{dE_1} + \frac{dS_2(E - E_1)}{dE_1} \right) = 0$$

$$\Rightarrow \frac{dS_1(E_1)}{dE_1} + \frac{dS_2(E - E_1)}{dE_1} = 0$$

$$\frac{d}{dE_1} \ln S_1(E_1) + \frac{d}{dE_1} \ln S_2(E - E_1) = 0$$

$$\frac{d}{dE_1} \ln \left(C_1 E_1^{\alpha_1 N_1} \right) + \frac{d}{dE_1} \ln \left(C_2 (E - E_1)^{\alpha_2 N_2} \right) = 0$$

$$\frac{1}{C_1 E_1^{\alpha_1 N_1}} \alpha_1 N_1 E_1^{\alpha_1 N_1 - 1} + \frac{1}{C_2 (E - E_1)^{\alpha_2 N_2}} C_2 \alpha_2 N_2 (E - E_1)^{\alpha_2 N_2 - 1} \cdot \frac{d}{dE_1} (E - E_1) = 0$$

$$\alpha_1 N_1 E_1^{-1} - \alpha_2 N_2 (E - E_1)^{-1} = 0$$

$$\alpha_1 N_1 (E - E_1) - \alpha_2 N_2 E_1 = 0$$

$$-(\alpha_1 N_1 + \alpha_2 N_2) E_1 + \alpha_1 N_1 E = 0$$

$$\Rightarrow E_1^* = \alpha_1 N_1 E / (\alpha_1 N_1 + \alpha_2 N_2)$$

WE ALSO HAVE:

$$\frac{d^2}{dE_1^2} \ln S_2(E-E_1) = \frac{d}{dE_1} \left(\frac{1}{S_2(E-E_1)} \frac{dS_2(E-E_1)}{dE_1} \right)$$

PUT THESE TERMS BACK TO OUR EXPANSION:

$$S_1(E_1) + S_2(E - E_1) \propto$$

~~some constant~~

$$\propto h_u S_1(E_1^*) + h_u Q_2(E_1^* - E_1) +$$

$$+ \frac{1}{2} \left(-\frac{1}{C_1} \alpha_1 N_1 E_1^{-\alpha_1 N_1 - 1} + \alpha_1 N_1 (\alpha_1 N_1 - 1) E_1^{-2} \right) (E_1 - E_1^*)^2 +$$

$$+ \frac{1}{2} \left(\frac{1}{C_2^*} \alpha_2 N_2 (E - E_1)^{-\alpha_2 N_2 - 1} + \alpha_2 N_2 (\alpha_2 N_2 - 1) (E - E_1)^{-2} \right) (E_1 - E_1^*)^2$$

AND NOW I DON'T KNOW WHAT.
